

MapQuest Place Search API

Provides:

- this API allows you to enter a type of place you'd like to search for (ex. Restaurants, Places of Worship, Paint Stores -- just about anything you can think of)
- it will return a list of places of that type near the address you've entered

Key Provisioning:

Pain factor (0=eypz...5=nightmare): 

- In order to get a key, one must sign up with a MapQuest developer account; nothing is necessary for this process beyond an email address (no linking to Google, Facebook, etc.)
- One is meant to specify an application name, company name, URL, etc, but **all this stuff doesn't matter!** None of it will impact the creation of the key, or its usage. (as far as I can tell, considering I have an app named "Don't stop me now")

*the above section originally written by Kiran Vuksanaj for the [MapQuest Geocoding API](#)

Quotas:

- 15k data transactions/month come free
 - This is *shared* with any other MapQuest Developer APIs you might use, when they share the same key

The Good:

- Free, easy to make an account
- Relies only on open-source mapping data (OpenStreetMap)
- Simple data access

The Bad:

- ...

The Ugly:

- ...

Location (Documentation): <https://developer.mapquest.com/documentation/search-api/v2/>

Example Request:

https://www.mapquestapi.com/search/v2/radius?origin=Denver,+CO&radius=0.15&maxMatches=3&ambiguities=ignore&hostedData=mqap.ntpois|group_sic_code=?|581208&outFormat=json&key=KEY (note you must replace KEY with your own key)
